the top 10 in a ranking of my google search result, What should I do? Google make the ranking for their own purposes. It makes no sense to think that I need to submit my google page for ranking. Protease activated receptor 2 activation by

---

thrombin enhances the expression of endothelin-1 and fibronectin in human endometrial stromal cells. We recently reported that thrombin activates protease activated receptor 2 (PAR2) on endometrial stromal cells and that PAR2 activation

---

enhances the expression of endothelin-1 (ET-1), plasminogen activator inhibitor type 1 (PAI-1) and vascular cell adhesion molecule 1 (VCAM-1). In this study, we focused on the effects of thrombin on endometrial stromal cells.

---

Human endometrial stromal cells were obtained from explants of endometrial tissue and cultured with and without thrombin, and the expression of PAR2, ET-1, fibronectin, plasminogen activator inhibitor-1 (PAI-1) and VCAM-1 was analyzed.

---

The level of fibronectin mRNA in the stromal cells was also determined by reverse transcriptase-polymerase chain reaction. Thrombin stimulated the expression of PAR2, ET-1 and fibronectin and increased the level of

---

fibronectin mRNA in endometrial stromal cells. Thrombin also enhanced the expression of PAI-1 and VCAM-1 mRNA, but the effect was much less. It is suggested that thrombin induces ET-1 expression and induces the accumulation of

---

fibronectin via the PAR2 signaling pathway in the stromal cells. These effects of thrombin may be important in the development of endometrial adhesion. This invention relates to a process and composition for blocking or
